

XM satellite radio is a great value to me and my family. I do not feel the NAB should be able to dictate what XM transmits. I am an avid listener of the traffic and weather station as I commute over 2 hours a day to and from work. Being able to change to a station that instantly gives me local conditions is great. XM is simply doing what the public wants and as it is within their legal rights, I don't think anyone should have a problem with it.
